

- h. Organizing data needed for the AI-assisted diagnosis is an additional burden to hospital personnel who are already rendering patient care and monitoring in the midst of the COVID-19 outbreak.

4.3.2. AI Limitations

AI has several limitations. These include “Area Under the Curve, model maintenance, brittleness or tendency of an AI model to ‘break’ given different or varying disease distributions also known as population/covariate shift.”

4.3.3. Hardware

The high-performance computer included in the product package has more than one (1) graphics processing unit (GPU), which is no longer impressive, as there are many computers now which have more than one GPU.

Section 4.

Recommendation

The Health Technology Assessment Council decided **not to recommend the acceptance of the donation of the uAI-Discover-PNA.**
